

## Changelog

[2.1.1] - 2025-2-23

### Fixed

- **Logging & Performance**
  - Log truncation – Main dashboard and plugin logs capped at 500 entries to avoid unbounded DOM growth and memory use
  - Reduced forced reflow – Scroll updates use requestAnimationFrame to cut layout thrashing
  - Main process logs – DEBUG logs no longer sent to stdout unless DEBUG is set
  - Plugin logs – Removed noisy per-update console.log in the plugin log path
- **Experimental Features**
  - Plugin visibility – External devices from disabled plugins are hidden in the External Devices tab
  - Immediate updates – External device list refreshes when plugin config is saved
  - Plugin config – Added updatePluginConfig to the plugin manager for the IPC save flow
- **Status Bar**
  - Alerting status – Status bar now reflects alerting state (Inactive, Email, SMS, Email + SMS, Not Configured)
  - Gateway status – Correctly shows “Idle (ID X)” when polling is stopped instead of staying at “ID X Active”

[2.1.0] - 2025-2-5

### Changed

- **Plugins disabled/moved to Experimental Features:** The previous External Devices tab was moved to an experimental feature and is no longer supported.

### Fixed

- **Scanning for Gateways not processing batches, hanging:** Fixed issue with connection pooling that caused scanning the network for gateways to hang on first batch.

[2.0.10] - 2025-1-21

# Monnit MODBUS TCP Utility

## Fixed

- **Scanning for Gateways not processing batches, hanging:** Fixed issue with connection pooling that caused scanning the network for gateways to hang on first batch.

[2.0.9] - 2025-1-19

## Added

- **Direct link to gateway's HTTP Interface added:** Added direct link to gateway HTTP page under Gateway Settings.

## Changed

- **Adding sensors in Gateway Settings > Wireless Device Network:** Improved adding sensors from Gateway Settings in app.
- **Communication layer timeouts:** Refactored the communications layer to use a connection pool as to reuse the same socket for multiple requests. This prevents perpetual open communication threads and port exhaustion.

## Fixed

- **Gateway Settings > Status:** Fixed Gateway Settings > Status, so it loads properly.
- **Placeholders for Device ID and SC Code when adding sensors:** Fixed placeholder for Device ID and Security Code on adding to the Wireless Network in the Gateway Settings.

[2.0.8] - 2025-1-9

## Added

- **Auto Backup:** Added Portal Settings > Auto Backup which creates backups of the database automatically on configured schedule.
- **Auto Downloader:** Added Portal Settings > Auto Downloader, the feature exports CSV or PDF records for the designated period automatically.
- **System Log Export to CSV:** Added Portal Settings > Log > Export to CSV that saves the most recent System Logs to a CSV in the Downloads folder.

## Changed

- **Moved Plugin Manager link to External Devices:** The Plugin Manager button access was moved to the External Devices area away from the Portal Settings.

## Fixed

- **Resolved Portal Settings not saving:** The configurations Under Portal Settings were not saving to the database as a result of a race condition. This was resolved and configurations are now saving.
- **Resolved MODBUS TCP Enabling automatically:** A timeout occurred after the system attempted to enable the MODBUS TCP Interface during setup if it was disabled. More clear erroring and resolution was added.

## [2.0.7] - 2025-12-12

### Added

- **Resolved updater to link to manual download on MacOS:** The software update feature no longer attempts to install for the User – rather a link to the appropriate GitHub release is opened when the User clicks “Download”.

## [2.0.6] - 2025-12-12

### Added

- **Added Documentation links to System Tray/Menu Bar:** Documentation selection in the main menu bar and also in system tray/menu bar icon.

## [2.0.5] - 2025-12-08

### Added

- **In-app Update feature:** Software updater added to the Portal Settings. The User can manually check for updates or enable an auto-updater. The updates are processed through a GitHub source managed by Monnit.
  - **Auto-updater:** Toggle added for auto-updater that checks for updates once per week.

## Fixed

- **“Single Instance Lock” fix:** A bug allowed multiple instances of the app to run in the System Tray. This was resolved to allow only a single instance at a time.

## [2.0.0] - 2025-11-21

### Added

- **Plugin Architecture:** Introduced a modular plugin system to support external data sources and broadcast capabilities.

# Monnit MODBUS TCP Utility

- **Receive Plugins:** Added support for ingesting data from third-party sources.
  - **SNMP Trap Listener:** Listens for SNMP v1 traps on port 162 and logs them as external devices.
  - **MQTT Subscriber:** Subscribes to MQTT topics to ingest JSON payloads as external devices.
  - **BACnet Subscriber:** Discovers BACnet devices via Who-Is broadcasts.
  - **LoRaWAN Listener:** Decrypts and ingests uplink packets from Semtech UDP Packet Forwarders (Port 1700).
  - **MODBUS Poller:** Actively polls external MODBUS TCP devices for register data.
- **Broadcast Plugins:** Added capabilities to push Monnit sensor data to external systems.
  - **Webhooks:** Pushes JSON payloads to HTTP endpoints.
  - **MQTT:** Publishes sensor data and alerts to an MQTT broker.
  - **BACnet Server:** Exposes Monnit sensors as BACnet Analog Value objects.
- **External Device Support:** New "External Devices" tab in the dashboard to visualize data from non-Monnit sources alongside native sensors.
- **System Tray Support:** Application now minimizes to the system tray on close, allowing background operation. Right-click the tray icon to quit.
- **Database Schema Update:** Added external\_devices, external\_device\_history, and external\_device\_metadata tables to support the new data sources.
- **Installer Improvements:**
  - Updated installer name to "Monnit ALTA MODBUS TCP Utility Setup v.2.0.0.exe".
  - Added option to create a desktop shortcut (checked by default).
  - Added "Per User" vs "All Users" installation choice.
- **Setup Wizard Enhancements:** Added a "Skip Setup" option for users who wish to use the utility solely for external device monitoring without a Monnit Gateway.

# Monnit MODBUS TCP Utility

## Changed

- **Database Engine:** Migrated from sqlite3 (asynchronous) to better-sqlite3 (synchronous) for improved performance and stability in the Electron environment.
- **Electron Version:** Standardized on Electron v31.2.1 for stability and native module compatibility.
- **Navigation:** Updated internal links to use relative paths (index.html instead of /) for correct rendering in the packaged Electron app.
- **IPC Communication:** Refactored backend-to-frontend communication to use a robust IPC bridge instead of Socket.IO, eliminating network overhead for local operations.
- **Logging:** Enhanced application logging to include plugin-specific events and errors.

## Fixed

- **Gateway Scan:** Fixed an issue where gateway scan results were not correctly displayed in the setup wizard due to IPC message routing errors.
- **Setup Logic:** Corrected a race condition in the setup wizard that caused "ReferenceError" crashes during initialization.
- **UI Overlap:** Fixed a layout issue where the "I'll add my gateway later" link overlapped with the manual entry form.

## [1.0.0] - 2024-05-15

## Added

- **Initial Release:** First public release of the Monnit MODBUS TCP Utility.
- **MODBUS TCP Polling:** Core engine to poll Monnit ALTA Ethernet Gateway 4 (Port 502) for sensor data.
- **Local Dashboard:** Web-based UI for visualizing real-time sensor readings (Voltage, RSSI, State).
- **Historical Data:** Embedded SQLite database to store and display sensor history charts.
- **Alerting Engine:** Configurable thresholds for sensor readings with Email (SMTP) and SMS (Textbelt) notification support.

# Monnit MODBUS TCP Utility

- **Gateway Configuration Proxy:** Ability to configure gateway settings (LAN, WSN, Server) directly through the utility UI.
- **Setup Wizard:** Guided step-by-step process to discover gateways and ensure correct configuration (unlock status, MODBUS enabled).
- **Network Discovery:** Automated scanning for Monnit gateways via mDNS and IP probing.
